SPECIAL ENFORCEMENT TEAM ALERTED TO A MURDER CASE IN WHICH SUSPECT FLED THE SCENE

CHALLENGE

Lieutenant Cory Leeper of the Special Enforcement Team was alerted to an emergency call regarding a murder case in which the leading suspect had fled from the scene. Commander Leeper promptly put Intrepid Response software solution into action — utilizing the *Locate* map for persistent and dynamic location tracking, *Activate* to mobilize his team, and *Connect* for critical information exchange.

Patrol officers utilizing Intrepid Response immediately initiated lock downs, and within seconds, SWAT and other tactical teams were swiftly activated to the secured area. After arriving, Lieutenant Leeper noticed an airship that had been deployed to survey the scene. The airship detected a heat signature emanating from one of the homes, indicating the potential presence of the suspect.

Utilizing Intrepid Locate's customizable marker feature, the heat signature location was instantly marked and annotated on the map and shared with the entire team. A scout team was safely deployed to confirm the location, with Intrepid Locate enabling real-time monitoring of all team movements. Evolving incident information was promptly updated and shared through Intrepid Connect. The team identified homes within an unsafe distance from the suspect, marked them on the map, and initiated the evacuation process. Steps that could have taken hours were able to be accomplished within minutes.

> **"Before Intrepid Response, connecting different teams such as those on the ground, dispatch, SWAT, and other independent agencies for mutual aid was a significant challenge due to the lack of connected systems. Response simplifies interoperability, enabling us to keep these disparate teams connected and well-informed."**

CHALLENGE CONT.

As officers were securing the surrounding area, the Intrepid Locate Map helped them identify a "wash" that could potentially breach their perimeter and serve as an escape route for the suspect. This escape route hadn't been visible from the view of the airship — only from the ground view with the Intrepid Response map. This new perspective prompted the officers to strategically position K9 officers in the area, anticipating the suspect's potential escape attempt through that route.
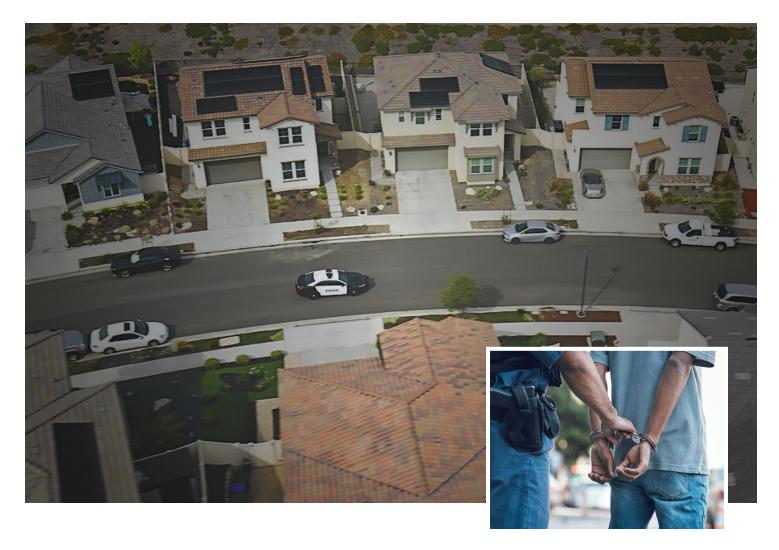

Local PD effectively employed professional tactics, real-time information, and clear communication to swiftly and safely apprehend the murder suspect, effectively bringing the incident to a close without further escalation.

> **"The Intrepid Response solution eliminates confusion, leading to quicker, more efficient, and safer decision-making by utilizing verified intelligence rather than just processing incoming information." — Lieutenant Cory Leeper**

> **"Intrepid Response is golden for me because, at a glance, I can easily manage the entire operation with real-time data. We can communicate well as a team and ensure everyone is on the same page during any operation."** — Lieutenant Cory Leeper

SOLUTION

The Intrepid Response solution facilitates increased safety through features like real-time information sharing, live officer location, and mutual aid connection, allowing for a safer, more effective incident response. With Intrepid Response, Local PD could keep track of their teams, identify missed escape routes, and avoid crossfire issues or weaknesses in containment and eliminate dangers to their communities.

Intrepid Response empowers teams to make well-informed and safer decisions during day-to-day operations and critical incidents. Emergency situations are often dynamic; teams require a reliable solution that can swiftly adapt to changes and facilitate collective decision-making. Intrepid Response gives users greater control by keeping them aware of their team's status, communications, and locations on-scene as well as off-scene.
